

ahc Impact Report

October 2026

April – September 2026

Message from our Hospital Director & CEO

Dear Friend of AHC,

Welcome to the October 2026 Impact Report.

Thank you for standing with Cambodia's children this year.
Our teams have upgraded diagnostic equipment, cared for children with complex, long-term conditions, and launched our Trauma and Critical Care Campaign to help families recognise emergencies sooner. We have also invested in our people, who are learning from colleagues around the world and bringing that knowledge home.

All of this is led by our Cambodian team and made possible by you. Because of your trust and generosity, every child who comes to AHC receives the care they need, whatever their circumstances.

We hope this report reminds you of the difference you continue to make and the lives you touch every day.

We look forward to continuing this journey together.

Yours sincerely,
Professor Ngoun Chanpheaktra

Hospital Director & CEO

Report highlights

Strengthening our diagnostic capacity: New ultrasound machine and DR Radiography Machine

Growing our people on the global stage

Our first Trauma and Critical Care Campaign

Our strategic goals (2022 - 2026)

AHC monitors key output metrics to measure and demonstrate the impact of our works.

In this report:

Provide specialty care for children across Cambodia with long-term, rare or acute conditions

- *Strengthening our diagnostic capacity: New ultrasound machine and DR Radiography Machine*
- *Rady's scooter: more than medical care*
- *Our key impact in numbers*

Improve healthcare for children across Cambodia through education for health workers, community members and caregivers

- *Trauma and Critical Care Centre (TCCC) launched its first awareness campaign*
- *Taking trauma and critical care education into communities*
- *Learning and sharing beyond the hospital walls*
- *Our key impact in numbers*

Run a locally-led, strong and transparent organisation

- *From Mongolia to the US: Growing our people on the global stage*
- *Protecting children through education*
- *A journey for Cambodia's children: Tiv Dararith, the first Cambodian to cycle around the world*

Financials

Strategic goal 1

Provide specialty care for children across Cambodia with long-term, rare or acute conditions

Strengthening our diagnostic capacity: New ultrasound machine and DR Radiography Machine

Quick, safe diagnosis is at the heart of good care for children. This period, two of our medical teams received new equipment to help them do exactly that.

Thanks to fundraising led by our anaesthesia mentor, Dr Richard Henker, the Surgical Unit received a new portable ultrasound. It allows our surgeons and anaesthetists to see inside a child's body without pain or radiation, helping them detect problems early and guide surgical procedures.

Our Radiology Lab received a new DR Radiography Machine, donated by The Clarkson Foundation, to support clear, reliable imaging.

Together, these tools shorten waiting times and help spare children unnecessary suffering. Every scan brings answers sooner for the child in front of us and for the family waiting beside them.

With heartfelt thanks to **Dr Richard Henker** and **The Clarkson Foundation** for making this possible.

Surgical Unit: portable ultrasound

Radiology Lab: digital X-ray cassettes

Rady’s scooter: more than medical care

Finding strength for every step

Rady, now 12, was diagnosed with Duchenne muscular dystrophy (DMD), a progressive genetic condition that gradually weakens the muscles. Since first coming to AHC in late 2020, he has returned every two months for ongoing care, including steroid medication, regular physiotherapy and close medical monitoring.

With a donor-funded mobility scooter, Rady can stay active, attend appointments and enjoy greater independence.

***“I hope this scooter will help my grandson move around more easily and give him more confidence,”* said Rady’s grandmother.**

For children like Rady, every appointment and every therapy session means more time at school, with family, and enjoying childhood with dignity.

Our key impact in numbers

April–September 2026

51,933

treatments by our Out-Patient Department

2,310

children stayed in our In-Patient Department

813

children treated in our specialist Intensive Care Unit

8,822

consultations given and surgical procedures performed, incuding major and minor surgery

197

newborns treated in our Neonatal Unit

Strategic goal 2

Improve healthcare for children across Cambodia through education for health workers, community members and caregivers

Trauma and Critical Care Centre (TCCC) launched its first awareness campaign

This Trauma and Critical Care Campaign gives parents the guidance they need to recognise an emergency before it is too late.

When a child is seriously injured or suddenly very ill, the first person to act is usually a parent, not a doctor. How quickly they seek care can change the outcome. At the day's workshop, parents learned to spot serious injuries and illnesses, know when to seek emergency care, and prevent accidents at home.

Our Community Health Action and Engagement Department will now take this knowledge to rural communities across Siem Reap.

130,831 people reached online between 22 July to 22 August 2026

150 people joined in person at Angkor Hospital for Children

Taking trauma and critical care education into communities

After our first trauma and critical care campaign, our TCCC and Community Health Action and Engagement Department kept taking life-saving knowledge beyond the hospital walls.

Through interactive sessions with parents, caregivers, teachers, students, and community members, they reached more than **600 people** with practical advice on preventing injuries, recognising emergencies, and seeking timely care.

> *"Preventable injuries remain a major concern, especially for children. By bringing trauma and critical care education directly into communities, we aimed to help families recognise risks and prevent injuries before they happen,"* **said Sokry, Community Programme Manager.**

Trauma and critical illness can strike without warning, but with the right knowledge, families can act quickly and save lives.

Learning and sharing beyond the hospital walls

Pittsburgh, USA

Anaesthesia nurse Malin Try and mentor Dr Richard Henker visited the University of Pittsburgh School of Nursing to meet former nurse anaesthetists and volunteers who have worked at AHC.

The visit opened the door for more students and health professionals to learn at AHC, and for our teams to learn abroad.

Phnom Penh, Cambodia

With support from the **SEVA Foundation**, three AHC ophthalmologists, Dr Khauv Phara, Dr Yin Sopheakboth, and Dr Chhit Liangheng, attended the Cambodia Ophthalmology Society's annual conference, which focused on retinoblastoma and orbital tumours. Dr Sopheakboth and Dr Phara shared their expertise in diagnosing and treating childhood eye cancer at every stage.

By sharing our knowledge and experience, we help more eye care professionals detect these conditions early, protecting children's sight and saving lives.

AHC, Siem Reap: A new link to a worldwide network of surgeons

Dr Kerry Vaughan is a paediatric and adult neurosurgeon at the Barrow Neurological Institute in Arizona. Through Barrow Global and the G4 Alliance, she works with a worldwide network of surgeons, including Richard Henker, AHC's anaesthesia unit mentor.

Her involvement with AHC began when our surgeons asked for her expert insight on a protocol for children's head injuries. It has grown into a partnership that connects our doctors and nurses to colleagues around the world, who share cases, ideas and advice in real time.

***"What's struck me at AHC is how well people work together. The Surgical Unit communicates well between nursing staff, anaesthesia staff, and surgeons, and makes sure every voice is heard and respected. It's really impressive,"* said Dr Kerry.**

The learning goes both ways. Dr Vaughan plans to take ideas from AHC's Surgical Unit back to the US and her other hospital partners, helping our practice reach well beyond Siem Reap.

Our key impact in numbers

April–September 2026

204,028

attendances at AHC's health education activities in villages, schools, communes and in the hospital

9,799

virtual and in-person attendances at our education trainings for external healthcare professionals, students and staff

16

local government health facilities supported to improve patient care, install life-saving equipment and training and mentorship

19

publications in international journals

Strategic goal 3

Run a locally-led, strong and transparent organisation

Growing our people on the global stage

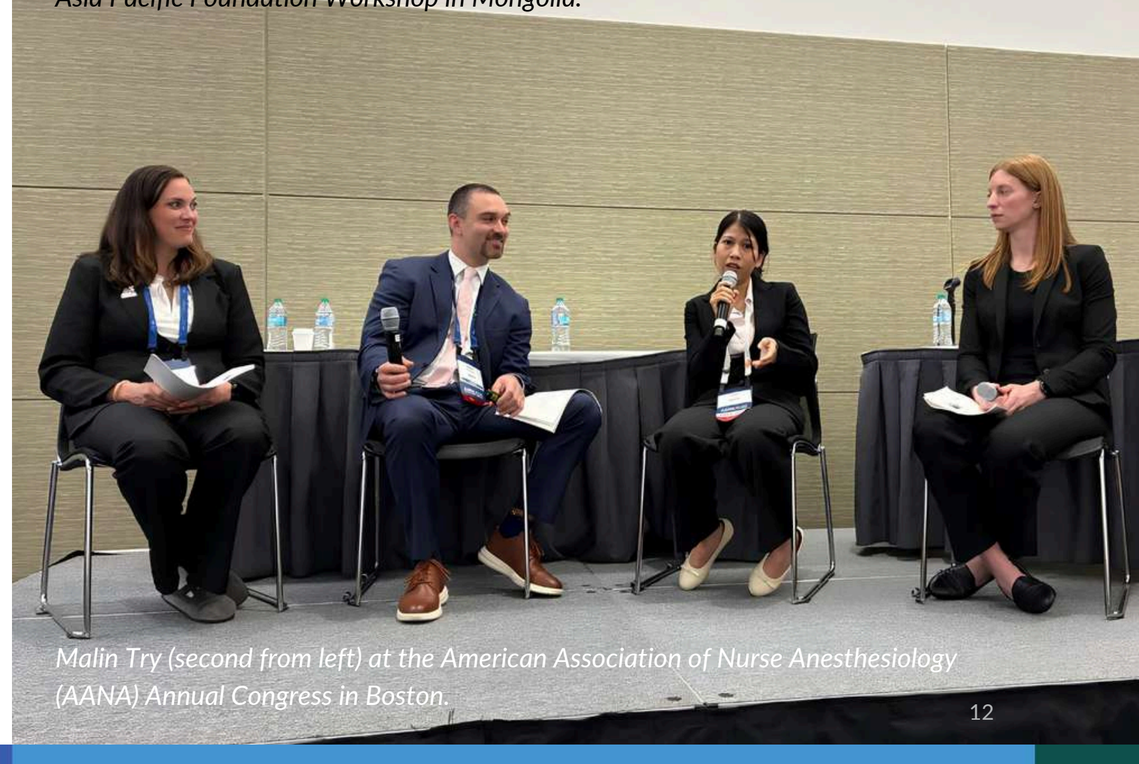

Sreylin Chum, Grants Manager, attended the ALSAC Global Asia Pacific Foundation Workshop in Mongolia, organised by ALSAC/St. Jude Children's Research Hospital. She joined foundation and fundraising leaders from across the region and returned with valuable insights into best practices in global fundraising, which will help strengthen AHC's fundraising and, in turn, our care for children and families for years to come.

Malin Try, Anaesthesia Nurse, attended her first American Association of Nurse Anesthesiology (AANA) Annual Congress in Boston, joining anaesthesia professionals from around the world to learn, connect and share knowledge. Closing

We are proud to see our teams representing AHC and Cambodian healthcare professionals on an international stage. Thank you to ALSAC/St. Jude, AANA, and Health Volunteers Overseas (HVO) for supporting these learning opportunities. Investing in our people strengthens our whole healthcare ecosystem.

Protecting children through education

Every child deserves to feel safe, protected and supported

Through our Community Child Protection Programme, AHC's Medical Social Work Unit and Community Health Action and Engagement Department are training 291 primary school teachers in the Angkor Chum Operational District to recognise and respond to child protection concerns, helping them become a vital link between vulnerable children and the support they need.

The training is led by Songha, our new Medical Social Work Unit Team Leader, who brings a background in psychology and years of experience in community outreach and social work.

"Teachers are often the first adults to notice when a child needs help. By equipping them to recognise and respond, we help protect children's futures," **said Songha.**

This work is made possible by the generous support of the **YP Foundation**.

A journey for Cambodia’s children: Tiv Dararith, the first Cambodian to cycle around the world

After two years of cycling solo, Tiv Dararith completed an extraordinary journey: more than 60,000 kilometres across 40 countries on three continents.

Along the way, he raised over US$260,000 to support the treatment of children at Angkor Hospital for Children and Kantha Bopha Children’s Hospitals.

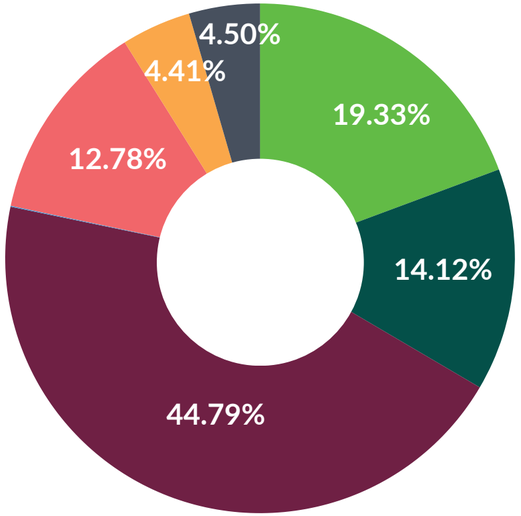

His journey showed how determination, kindness, and a clear purpose can inspire a nation and change thousands of lives. Thank you, Dararith, for every kilometre, and to everyone who donated and cheered him on.

Financials

Source of funds

Total funds raised
April–September 2026: US$2.28 million

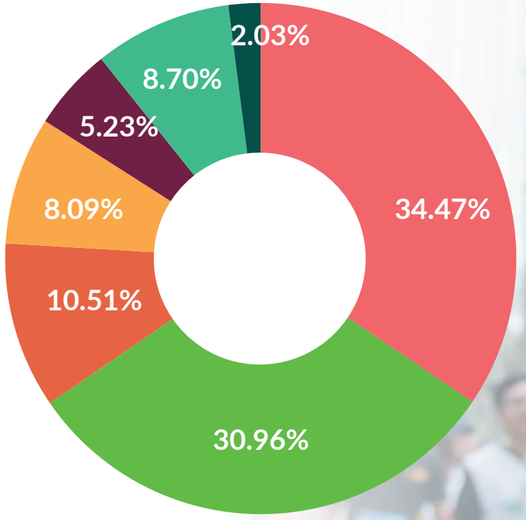

- International foundations and institutions
- International individuals and events
- Local fundraising
- Overseas government grants
- Patient contributions
- In-kind donations
- Other income

Overseas government grants made up less than 1% of total funding this reporting period.

Use of funds

Total funds used
April–September 2026: US$2.96 million

- Specialised paediatric care
- General paediatric care
- Community, research and health system strengthening
- Partnerships
- Core mission support
- Education
- Holistic support programmes

Thank you for improving healthcare for every child in Cambodia.

More surgeries. More sight restored. More futures saved. Stay tuned for exciting news about the new AHC Eye Center.
